PROFESSIONAL SUMMARY

SDET with 2+ years of experience in test automation for a B2B SaaS logistics platform with daily production releases. Builds and maintains scalable Playwright frameworks (Java, TypeScript), REST API test suites, and CI/CD-integrated regression pipelines. Experienced in test strategy, release qualification, and AI-assisted QA workflows. Currently leading a Java-to-TypeScript framework migration. Built an OCR-based invoice validation pipeline that removed ~90% of manual verification on a core financial workflow.

TECHNICAL SKILLS

Test Automation: Playwright (Java, TypeScript), Selenium WebDriver, Cucumber (BDD), TestNG, JUnit
API Testing: REST Assured, Postman, REST API validation (payloads, status codes, business logic)
Languages: Java (Core, OOP), TypeScript, SQL, Gherkin, JSON, XML
CI/CD & DevOps: Jenkins, Docker, Git, Bitbucket, LambdaTest, Slack integration
Test Engineering: Test Strategy & Planning, Functional / Integration / System / Regression / Smoke Testing, Exploratory Testing, Release Qualification, Estimation
AI-Assisted Engineering: Claude (Claude Skills, framework migration), Windsurf (AI IDE), GenAI-assisted test script generation
Tools: JIRA, Confluence, IntelliJ IDEA, Android Studio

PROFESSIONAL EXPERIENCE

Software Development Engineer in Test (SDET-1) | GoComet, Bengaluru, India **Feb 2025 – Nov 2026**
Promoted from QA Engineer to SDET within 6 months

- **Test strategy & ownership:** Own end-to-end test automation strategy, test planning, estimation, and Go/No-Go release sign-off for a B2B SaaS logistics platform with daily production releases, covering UI, API, and backend layers.
- **UI automation:** Architect and maintain a Playwright + Java + Cucumber (BDD) framework that automated ~70% of critical workflows, split into Smoke and Regression suites to reduce manual regression effort and shorten release sign-off time.
- **API automation:** Built and maintain a REST Assured suite covering ~30% of backend microservices, validating payloads, status codes, and business logic; refactored regularly to prevent production escapes from backend changes.
- **OCR invoice validation:** Designed an OCR-based pipeline that extracts invoice data from PDFs into JSON and cross-checks it against platform-generated invoices, eliminating ~90% of manual verification on a core financial workflow.
- **CI/CD:** Integrated automated suites into Jenkins pipelines (Git/Bitbucket), enabling early defect feedback and confident daily deployments.
- **Framework modernization:** Leading the migration of the Playwright framework from Java to TypeScript using Claude-assisted rewriting, removing Cucumber to speed up execution and merging separate API and UI repositories into one codebase.
- **AI-assisted product audit & automation:** Used Claude Skills to support an end-to-end product audit that reviewed workflows against existing coverage, uncovered missing scenarios and edge cases, documented them in a regression test sheet, created step-by-step Jira cards for each scenario, and automated them across product workflows with the existing Playwright framework.
- **Leadership:** Conduct code reviews, set automation standards, and drive best practices for the QA pod; collaborate with cross-functional teams on release readiness.

Android Developer | IMG Global Infotech Pvt Ltd, Jaipur, India **Jan 2023 – Jun 2023**

- Built native Android features in Java and partnered with QA to triage UI/UX defects, gaining hands-on grounding in the software testing life cycle (STLC).

EDUCATION

Master of Computer Applications (MCA), Information Technology | Lovely Professional University **2023 – 2025**
Bachelor of Computer Applications (BCA), Data Science | JECRC University **2020 – 2023**
